PRODUCT DESCRIPTION

ULTRASTRESS VISIO pressure pipes for potable water are made from PE100-RC material featuring blue VISIO layer (10% of wall thickness). PE100-RC material pipes are resistant to long term expansion of cracks, scratching and point type loads. Point type loads are especially common during assembly of the pipelines using trenchless installation methods (for instance, as a result of friction against the stones that are present in the soil). In case of a point type load, tension and plastic deformations are produced in the material, which may cause cracks in the internal surface of the pipe. VISIO layer helps to identify the pipe damage that has occurred during installation. Max allowed depth of pipe damage equals to the thickness of VISIO layer, i.e. 10% of wall thickness. In the case of more significant damage to the pipe, uncovering the black inner layer, decision on further use of the pipe must be made.
Material: High density polyethylene (HDPE), type PE100-RC. With blue VISIO layer.
Pipes are manufactured according to EN 12201, PAS 1075 specifications.

APPLICATION AREA

ULTRASTRESS VISIO pipes are designed for potable water pressure systems, with recommended installation methods of pulling in the site in the old pipe according to EN 12889, EN 14457 and in the cases with the reuse of the old soil.

PRODUCT DIMENSIONS

Pipe dimensions conform to EN 12201-2 specifications. Pipe nominal pressure according to EN 12201-2 (with C=1,25 at temperature 20 °C) PN10 bar for SDR 17 pipe and PN16 for SDR 11 pipe.
